Unleash Full Workplace Security

Leverage Your Microsoft E5 Investment with our Orange Cyberdefense Services

Microsoft 365 is by far the most used workspace solution in the world, making it the logical target for cyberattacks. Sophisticated threats such as business email compromises and ransomware lead to financial losses and business disruptions. Not to mention the data breaches that are making headlines daily, damaging corporate reputations.

Securing the digital workspace has become paramount to protecting an organization's sensitive data, intellectual property, and overall business continuity.

Thankfully, Microsoft 365 E5 licenses already include Microsoft Defender XDR, the most widely used workspace security solution and the easiest way to enforce workplace security. However, businesses often struggle to find cybersecurity expertise to manage Defender XDR effectively.

At Orange Cyberdefense, we provide 24/7 support for a wide range of Microsoft security solutions including Defender XDR. This allows enterprises to fully leverage their investment in Microsoft 365 by fully using its security solutions according to best practices and achieve unparalleled protection and peace of mind.

Our security experts help you to cover common and advanced workspace cybersecurity risks

Managed Services for Microsoft Defender XDR

Endpoint   Office 365   Identity   Cloud Apps

Let Orange Cyberdefense Be Your Shield

- We manage the security incidents of your Microsoft Defender XDR tenant 24x7 (MDE, MDO, MDI, MDCA)
